Faiyaz M A

Lead XR developer

Chennai , India +919840887989 mail25yaz@gmail.com Experience: 10 years

faiyaz

Summary

I have 10 years of overall programming experience, with the last 7+ years focused on AR/VR development. I'm currently a Lead XR Developer at Meynikara Solutions, where I've led 50+ VR simulations using Unity3D and C#. Apart from full time development , I also work closely with stakeholders on SoW discussions, sprint planning, and overall project planning. I also help with feasibility checks, build PoCs, and support the team in acquiring new clients through demos and technical support.

Before moving into XR, I worked as a full stack developer for around 3 years, which gave me a strong foundation in software development. I enjoy solving real-world problems using AR/VR and building practical, scalable applications. Recently, I also led our AI team to build GenAI apps integrated with XR/Web — one of the apps generated over 10k+ organic leads.

Skills

Unity3D	**C#**	**Augmented Reality**
Virtual Reality	**MQTT**	**Digital twins**
VR Training	**3D simulations**	**Multiplayer**
Vuforia	**Mobile Development**	**WebGL**
GIT	**OPC UA**	**Three.js**

Experience

MEYNIKARA SOLUTIONS PRIVATE LIMITED
Lead XR Developer
Chennai
May 2018 - Current

- Develop AR , VR and Mixed Reality and collaborative applications
- Talk to stakeholders to understand requirements, share updates, and keep the project on track.
- Plan the overall project structure to make sure it scales well and performs reliably.
- Build PoCs to test out ideas and check if they're doable before full development.
- Start projects from scratch by setting up base code and core systems.
- Support the team throughout development and make sure deliveries go out on time with good quality.
- Have hands-on experience with ARCore, ARKit, Vuforia, OpenXR, Photon, and other related SDKs.
- Focus mainly on building AR/VR experiences and 3D simulations that are interactive and practical.

Seventech Labs Private Limited
Associate Software Developer
Chennai, India
May 2015- May 2018

Worked on multiple projects using Java Spring, Laravel, Angular, MySQL, and MongoDB. Built and deployed applications across different domains like e-commerce, ERP, and finance. Handled both frontend and backend, and took care of server deployment as well.

Projects

Apollo Tyres VR

Description: Led my team to deliver 5+ VR simulations for Apollo Tyres manufacturing plants in a short time. Developed an immersive cycling application where users could take a virtual walkthrough of the plant by pedaling a real cycle connected via a BLE sensor.
Role: Project Lead and Unity App Developer
Tech Stack: Unity3D, OpenXR, BLE

Landscaping Mixed Reality App

Description : Built a mixed reality app that lets users place landscaping models from different categories in their real-world space. The models are loaded dynamically through REST APIs and are addressable. For the same client, I also developed another MR app to help visualize microservices architecture and data flow in an interactive way.
Role : Project lead and Unity Developer
Tech Stack : Unity3D , S3

Warehouse Digital Twin

Description : Built a cross-platform digital twin app that replicates the warehouse layout including shelves, bins, and inventory — all updated in real-time.
Role : Project lead and Unity Developer

Tech Stack : Unity3D, WebSocket, Rest API

Augmented Reality (AR) On-The-Job Training Application

Description : Developed a robust AR application to provide step-by-step instructional overlays on real-world objects, facilitating on-the-job training. Implemented dynamic content loading and interactive elements, ensuring seamless user engagement and training effectiveness. Integrated real-time data analytics to track and enhance user performance.
Role: Project Lead and Unity app Developer
Tech Stack : Unity3D , Vuforia.

GenAI + XR E-Learning Simulations

Description : Convert University subjects to interactive 3D simulations compatible across multiple platforms like VR , Mobile ,WebGL with different learning, assessments and multiplayer mode.
Role : Write a core reusable framework across multiple platforms to help quickly deliver multiple projects of similar requirements and provide support to team during implementation.
Tech Stack : Unity3D , C# , Photon and XR Interaction Toolkit

AR Powered Ed App

Description : Hippopappa , in-house product targetted for kids aged 3-7 uses Augmented reality as core feature. A monthly subscription based puzzle box is delivered to customer each month which contains flash cards and puzzles teaching topics like science and maths. This also involves AR coloring cards where the 3D models appear in AR in the same color as painted on cards.
Role : My Role was technical lead and to write features of the app and oversee the development.
Tech Stack : Vuforia , Unity3D.

Fire Safety & Rescue VR

Description : A HTC Vive VR application for ONGC Fire Safety team covering Fire Extinguishing methods using Extinguishers and Hose and also casuality rescue simulations. Applications involved various modules like Tutorials , Guided teaching mode , Evaluation mode and emergency scenarios training.
Role : Developer and delivery head.
Tech stack : SteamVR, VRTK , Unity3D.

Exhibition Metaverse VR

Description : A Multiplayer VR walkthrough of a historic place and Holy site where a guide in metaverse takes a virtual tour to exhibition attendees.
Role : Delivery Head and provide technical support.
Tech stack : Unity3D , Pico SDK , Photon

Cloud Security VR

Description : A gamified multiplayer VR experience to demonstrate stakeholders on importance of cloud security and how some of the basic services protect the cloud application from network attack.
Role : Developer and delivery head.
Tech stack : VRTK, photon , Unity3D
